

A LabCorp Company

November 7, 2009

Dear Valued Client,

Esoterix will be updating its coagulation reports to provide a more user-friendly result report. The streamlining features include:

- Discontinuing the listing of age-specific range intervals with certain coagulation assays
  - Where normal values for the pediatric and geriatric populations are essentially the same as for 18-60 year old adults
  - Where age is not a factor in reference range determination
- A single reference range will be provided on specific hemostasis assays where the range is applicable to patients of all ages

For those coagulation assays whose normal levels vary with age, there will be no change in report format.

You should begin seeing the updated reports over the next few weeks, and these changes only apply to Esoterix coagulation reports. For additional information, please contact Esoterix client services at 800-444-9111. We appreciate your business and look forward to serving you and your patients.
